

Maximizing the Value of Your GME FTE: Supporting Success Through Strategic IRIS Management

Leveraging IRIS

Our IRIS support services help GME teams ensure accuracy, compliance, and strategic value across scheduling and reimbursement processes. Through comprehensive review and optimization of IRIS configurations, we help organizations strengthen data integrity, improve reporting reliability, and reduce administrative burden. By aligning the system with organizational goals, institutions can enhance operational efficiency, support reimbursement accuracy, and leverage trusted data for informed decision-making and long-term success.

Demonstrated Impact

Our IRIS optimization services deliver measurable value beyond system configuration by strengthening workflows and data-driven decision-making. We help GME teams build a deeper understanding of IRIS best practices, streamline scheduling and rotation management processes, and foster collaboration across GME, finance, and program leadership. The result is increased efficiency, reduced manual rework, improved confidence in reporting and cost report data, and clearer insight to support accreditation, reimbursement, and strategic planning efforts.

Strategy

Leverage IRIS data to support system-wide optimization and informed decision-making. Identify opportunities to improve counting methodologies, strengthen reimbursement strategies, and support long-term GME growth planning.

Finance

Establish RMS as the single source of truth for IRIS reporting. Improve alignment between trainee activity and cost report data while reducing the risk of under- or over-reporting Medicare GME reimbursement.

Accreditation

Ensure resident schedules, rotations, and documentation align with ACGME requirements. Improve reporting consistency, strengthen audit readiness, and provide program leadership with greater confidence in accreditation-related data.

Driving Better Outcomes

Germane Solutions helps organizations move beyond basic IRIS compliance through comprehensive review and optimization. By strengthening data quality, improving reporting accuracy, and aligning IRIS with organizational objectives, we enable institutions to enhance efficiency, support reimbursement integrity, and leverage data as a strategic asset for GME operations.
